

Tanker Trucks

Operator Compliance

TSSA has reviewed its data on tanker trucks and it shows that issues related to tanker trucks are typically operational. To address that issue, TSSA, in the future, will be asking for assurance that operators comply with the following:

- ✓ The CSA B620 periodic inspections and testing required by Transport Canada
- ✓ On-going driver training program that addresses loading, unloading, testing emergency shut down systems, visual inspection of the truck & associated equipment and emergency response & reporting
- ✓ New drivers are trained prior to unsupervised operation of tanker trucks

The first point B620 inspection and testing are the basis that the equipment is safe to operate. The second and third points address the operation of the tanker truck regarding fuels safety.

Please ensure that your inspection, testing and training programs are up-to-date and that you have verification documentation that can be produced for inspection or auditing purposes.

**If you have any questions, please contact TSSA at
1-877-682-TSSA (8772).**
